

## Worksheet 10

1. **(Ratio Test)** Let  $X_1, \dots, X_n \stackrel{iid}{\sim} \text{Poisson}(\lambda)$ . What is the test statistic  $\Lambda$  for the corresponding likelihood ratio test for the null hypothesis  $H_0 : \lambda = 1$ .

2. **(Ratio Test)** Let  $X_1, \dots, X_n \stackrel{iid}{\sim} \text{Exp}(\lambda)$ . What is the test statistic  $\Lambda$  for the corresponding likelihood ratio test for the null hypothesis  $H_0 : \lambda = 1$ .

3. **(Ratio Test)** Let  $X \sim \text{Bin}(n, p_1)$  and  $Y \sim \text{Bin}(n, p_2)$  be independent random variables. We want to test the hypothesis that  $H_0 : p_1 = p_2$ . What are the corresponding  $\Theta$  and  $\Theta_0$  in our updated formulation of hypothesis testing?<sup>1</sup> If we use a Likelihood Ratio Test for this hypothesis, how many degrees of freedom should  $\Lambda$  have?

<sup>1</sup> We will derive the actual test itself in a more general form next class.

4. **(Ratio Test)** Recall that we used the one-sample ANOVA test with the null-hypothesis that the means of  $K$  samples are all the same. Write down and describe the values of  $\Theta$  and  $\Theta_0$  that correspond to this test. If we use a Likelihood Ratio Test for this hypothesis, how many degrees of freedom should  $\Lambda$  have?

5. **(MLE Practice)** Let  $X_1, \dots, X_n \stackrel{iid}{\sim} \text{Uniform}(0, a)$ . Find the MLE estimator for  $a$ . Note: You cannot do this using the derivative. Just think about it!
