## Worksheet 19

- **1**. Let  $X \sim N(\mu, \sigma^2)$ , with  $\sigma^2 > 0$  a fixed and known constant. (a) Compute the Fisher Information  $\mathcal{I}(\mu)$ . (b) The MLE for  $\mu$  is equal to X (generally it's the mean, but in the one-observation case the mean is equal to X). Find the efficency of the MLE.
- **2.** Let  $X \sim Poisson(\lambda)$ . (a) Compute the Fisher Information  $\mathcal{I}(\lambda)$ . (b) The MLE for  $\lambda$  is equal to X (generally it's the mean, but in the one-observation case the mean is equal to X). Find the efficency of the MLE.
- 3. Let  $X \sim Binomial(n, p)$  with n > 0 a fixed and known constant. (a) Compute the Fisher Information  $\mathcal{I}(p)$ .<sup>1</sup> (b) The MLE for p is equal to X/n. Find the efficiency of the MLE.

<sup>&</sup>lt;sup>1</sup> Try to simplify this as much as possible. You should be able to get something that has a denominator equal to p(1-p).
